designed for use with
Anprolene and EOGas sterilisers.

AN1071 Humdichip®

Suitable for using with Anprolene and EOGas sterilisation systems, the Andersen Humidichip is designed to stabilise relative humidity during the sterilisation cycle. If sufficient humidity is not present then spores may desiccate and become resistant. The pre-moistened 5cm² Humidichip maintains a high relative humidity by releasing up to 4g of water vapour, thereby increasing the efficiency of the sterilisation process.

Quantity: 25 / pouch

Shelf life: 3 years from date of manufacture

AN1072 Humditube

The Humditube has been developed to work with the Humidichip. The Humditube guarantees that there is free air circulation around the Humidichip, thereby ensuring that the chip performs at maximum efficiency. Humditubes are reusable.

Employ Humidichip with a Humditube in each sterilisation cycle.

Free Key Operator Training

Andersen provides free training for as many operators as required, for the lifetime of the cabinet.
